FOR IMMEDIATE RELEASE

Compunetix Delivers Secure Collaboration for DISA

CONTEX® is only JITC-Certified full-featured platform in the market

Monroeville, Pa., December 20, 2007 – Compunetix announces the extension of its technology of cooperation further into the government segment with JITC (Joint Interoperability Test Command) approved media platforms. Following rigorous Interoperability (IO) and Information Assurance (IA) testing, the Compunetix CONTEX conferencing systems have been certified interoperable for use in government and mission-critical initiatives. This designation allows Compunetix platforms to be installed across the DSN (Defense Switched Network), the military's communications network, and to provide conferencing capabilities for cross-organization collaboration.

JITC is the Defense Information System Agency's (DISA) primary agent for testing, evaluating, and certifying Information Technology (IT) and National Security Systems (NSS) used in joint and combined operations. The certification process assures that a system meets the joint operability requirements of its users and assures that communications will remain intact, minimizing risk and maximizing efforts. To view the Department of Defense Voice Network Approved Products List, please access http://jitc.fhu.disa.mil/apl/dsn/apl_compunetix.html. Compunetix platforms boast exceedingly high reliability and performance ratings that allow this JITC designation, and have facilitated many other certifications including Sonus Interoperability approval and ISO-governed engineering procedures.

Mr. John Stare, Director of Government Sales for the Communications Systems Division states, "The certification process for JITC, IO, and IA is extensive and intensive. Our team has put in exhaustive hours to assure that our government clients can choose our media processors and feel confident in their ability to perform in high-stress, high-volume environments. CSP and enterprise customers also benefit from the certification and from the stability and quality of service that must be present to receive such a certification."

Compunetix is the leading manufacturer of audio and web collaboration solutions in the world. With nearly 400,000 ports installed in more than 26 countries, the company has the industry's largest worldwide deployment of digital teleconferencing systems. Dedicated innovative technology, Compunetix manufactures all aspects of its conferencing equipment, ensuring its customers that their media processors are the highest quality, most reliable and most flexible solutions available.
