## **Compunetix / Compunetics / Chorus Call Take Time To Vote**

MONROEVILLE, Pa., Oct. 20 /PRNewswire/ -- Compunetix, Inc., Compunetics, Inc. and Chorus Call, Inc. are encouraging employees to vote on November 4th and recognizing them for their efforts. By continuing their non-partisan program of allowing all employees time off during the work day to vote, the companies hope for another successful employee turnout on election day. Employees who present valid proof that they exercised their right will receive four additional hours of paid time off (PTO).

The three companies developed this innovative initiative to encourage all eligible employees to participate in the election process. Dr. Giorgio Coraluppi, president of the three companies and himself a naturalized American citizen, feels strongly that employees should exercise this important right. "We do not care whom they vote for, just that they vote," Dr. Coraluppi explains. "We want to eliminate any barriers to the voting process."

### About Compunetix, Inc.

Compunetix is the leading manufacturer of multipoint collaboration equipment in the world. With more than 400,000 ports installed in more than 25 countries, Compunetix has the largest worldwide deployment of teleconferencing systems in the industry. Compunetix, Inc. develops state-of-the-art multimedia multipoint telecommunications systems for audio/videoconferencing and mission-critical applications. Compunetix operates in both the commercial and government markets through its Communications Systems Division, Video Systems Division and Federal Systems Division. Compunetix also provides engineering and manufacturing services through its Instrumentation Systems Division.

### About Compunetics, Inc.

Compunetics, Inc. is a leading manufacturer of printed circuit boards for the defense, aerospace, communication, high speed computing, medical and semiconductor markets for rigid, flexible and rigid-flex printed circuit boards. The Company's Engineering Department is an independent profit center that serves the most demanding needs of its customers, as well as engaging in Research and Development. The Manufacturing Department is a key supplier for several high-profile organizations for the commercial and defense markets, and the Engineering Services Division offers schematic capture, PCB layout, auto-routing and artwork generation to customers both as an overflow service and as a support function on a contract basis.
