FOR IMMEDIATE RELEASE

CONTEX Summit™ Completes Interoperability Testing with BroadSoft®

Collaboration platform works seamlessly with BroadWorks® VoIP platform

Monroeville, Pa., February 14, 2011 – Compunetix, a collaboration solutions provider, today announced it has completed interoperability testing of its CONTEX Summit™ with BroadWorks®, the VoIP application server by BroadSoft®. This interoperability assures plug and play capabilities for telecommunication service providers interested in integrating the Summit with their existing BroadSoft services.

Mr. Gerard Pompa, Senior Vice President and Division Manager of the Compunetix Communications Systems Division, states: "We put our hardware through rigorous interoperability testing - to assure that our customers have the quality of service regardless of the network and environment. Voice quality is paramount to us, and is what differentiates us in the industry. We will continue to ensure seamless integration with our partners so that none of the quality of service is lost in network translation."

"Compunetix products work within IMS environments and our interoperability status proves that the scalability, voice quality, and overall reliability inherent in our systems remain intact regardless of the VoIP infrastructure," notes Mr. Benjamin Krokosky, Director of Software Engineering at Compunetix.

The CONTEX Summit is the cornerstone media processor in the multipoint collaboration industry, combining the quality, reliability, and feature richness of traditional solutions with the flexibility and cost effectiveness of IP-centric, next-generation communication. Featuring unmatched scalability, open-system APIs for development, and a full roster of complementary software and control applications, the Summit supports all call types, endpoints, and markets for a full-featured solution.
