FOR IMMEDIATE RELEASE

CONTEX Summit® Powers AT Conference VoIP Collaboration

Monroeville, Pa., October 4, 2012 – AT Conference, a leading provider of conference call services and web conferencing, is launching a powerful new voice over IP (VoIP) collaboration solution powered by the Compunetix CONTEX Summit, the industry's benchmark multipoint control unit. The VoIP optimization will allow AT Conference to provide more cost effective solutions and superior service offerings for customers while building a more sustainable and maintainable back-end infrastructure. A VoIP-based service enables mobility across devices, utilizes the cloud environment, and allows for a common experience across applications like billing and reporting. The Summit platform was engineered specifically for VoIP service, with no need for an external gateway. Multiple interoperability certificates have been awarded to the Summit, making the VoIP path simple and efficient.

AT Conference chose Compunetix after an extensive evaluation of both media processors and Multipoint Control Units. The Summit fits easily within an IMS architecture allowing for optimal voice quality that is so often lacking in media processor performance. Flexible, open APIs and superior reliability make the Summit the ideal voice processor component in any architecture, allowing for a truly best-of-breed solution.

"We chose Compunetix for its reliability, yet it is progressive enough to allow us to look to the future of collaboration," notes Mr. David Jannetti, CEO of AT Conferencing. "Our VoIP service will allow customers more service offerings and better pricing."

"Our equipment accommodates multiple upgrade paths, and VoIP is an extremely beneficial step for Collaboration Service Providers to take in order to innovate," states Mr. Benjamin Krokosky, Director of Software Engineering at Compunetix.

The CONTEX Summit

The CONTEX Summit is the cornerstone media processor in the multipoint collaboration industry, combining the quality, reliability, and feature richness of traditional solutions with the flexibility and cost effectiveness of IP-centric, next-generation communication. Featuring unmatched scalability, open-system APIs for development, and a full roster of complementary software and control applications, the Summit supports all call types, endpoints, and markets for a full-featured solution.
