FOR IMMEDIATE RELEASE

Powerful Recording Capabilities Optimized in Compunetix Suite of Voice Solutions

Monroeville, Pa., January 23, 2012 – Eliminate missed conference calls forever with the newest optimized CONTEX Digital Record and Playback (CDRP) 3.0 system from Compunetix. This new audio publishing platform was created to work stand-alone or seamlessly integrate with the CONTEX Summit media processor, the most powerful audio collaboration platform on the market. The combined capabilities allow participants to experience an exceptionally clear playback of a conference long after it has concluded. CDRP features a VoIP network interface and extensive standard features, including manual and automatic record and playback. Playback control enables listeners to manage their experience, allowing them to skip forward, skip backward, and return to the beginning of a recording using a series of DTMF commands. These features provide invaluable convenience for customers and a competitive advantage to Collaboration Service Providers.

CDRP also features an intuitive web interface that provides easy access to manage recordings from any network-connected computer. With secure login capability and distinct permission levels, customers can easily control and publish recordings internally. Users can also edit recordings, save them in various formats, and track who accessed the recordings and when.

"Our recording capabilities make on-the-go and on-demand participation easy and intuitive," notes Mr. Benjamin Krokosky, Director of Software Engineering at Compunetix. "This product allows CSPs to differentiate themselves in the marketplace and advance the way people communicate."

The CONTEX Summit

The CONTEX Summit is the cornerstone media processor in the multipoint collaboration industry, combining the quality, reliability, and feature richness of traditional solutions with the flexibility and cost effectiveness of IP-centric, next-generation communication. Featuring unmatched scalability, open-system APIs for development, and a full roster of complementary software and control applications, the Summit supports all call types, endpoints, and markets for a full-featured solution.
