CONTEX Mobile Application

giving voice to collaboration

CONTEX Connections™

Create and control conferences on the go

Join as host or guest

View and edit conferences

Configure DTMF conference controls

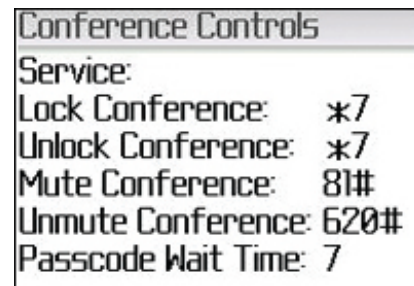

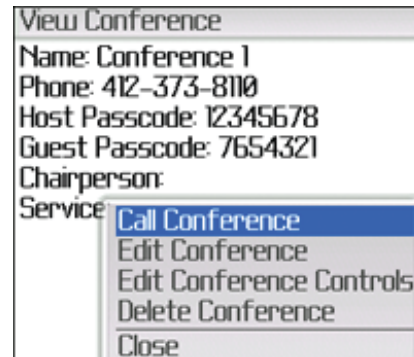

Customize and brand your splash screen

CONTEX Connections is a simple and efficient application that allows mobile users to create, manage, and control on-demand conferences straight from their smartphones. Using Compunetix conferencing technology and your smartphone's internal contact directory, this application transforms your wireless device into the primary tool for interactive group communications. As part of the CONTEX Mobile™ suite of applications, CONTEX Connections empowers users with instantaneous collaboration available right at their fingertips.

User Benefits

With CONTEX Connections, users can participate in high-quality, real-time, full duplex voice conversations. Not only can users participate in conference calls, but for power conferencing users, this is the most immediate and efficient way to initiate and manage conference calls. The application is menu driven, which means there are no complex commands to learn and no difficult user names and passwords to remember. Using the simple drop down menu, in no time at all, users can:

- **Initiate and Join Conferences**
Seamlessly assemble conferences directly from the smartphone, or in one click, join an existing conference.
- **Create New Conferences**
Instantly enter the conference name, phone number, passcode, and chairperson status and your conference is created.
- **View Existing Conferences**
Use the viewing area to view, call, edit, or delete existing conferences.
- **Control and Configure Conferences**
Configure your conferences so that you control them from a default set of DTMF keys—custom keys or those available from your service provider. Conference control functions include conference lock/unlock, mute/unmute, and hold/unhold.

Provider Benefits

CONTEX Connections allows conferencing service providers to further satisfy the needs of power conferencing users. With a customized and branded look, this application is ideal as an additional cost-effective tool for CSPs to extend their corporate service offerings. By meeting the customers' needs with mobile on-demand conference control, CONTEX Connections reduces customer churn, generates service "stickiness," and drives on-demand minutes use.

How to get it

Conferencing Service Providers purchase the client license bundles necessary to meet user demand. In one simple download, on-demand users download the client application from the provider's site to their PCs and install it on their smartphone. Once users configure their on-demand account details during installation, they are ready to begin using CONTEX Connections.

Components

Client Application

Allows the user to initiate and manage the call. Additional conference attendees can be at any phone (mobile or fixed) and do not need the client to participate.

CONTEX Summit Media Processor

The client application communicates directly with a Compunetix conferencing media processor via standard audio connection. No wireless data communication is required for use. The CONTEX Summit provides world-class reliability and is designed to support up to 9600 ports of industry-standard audio communication.

License Manager

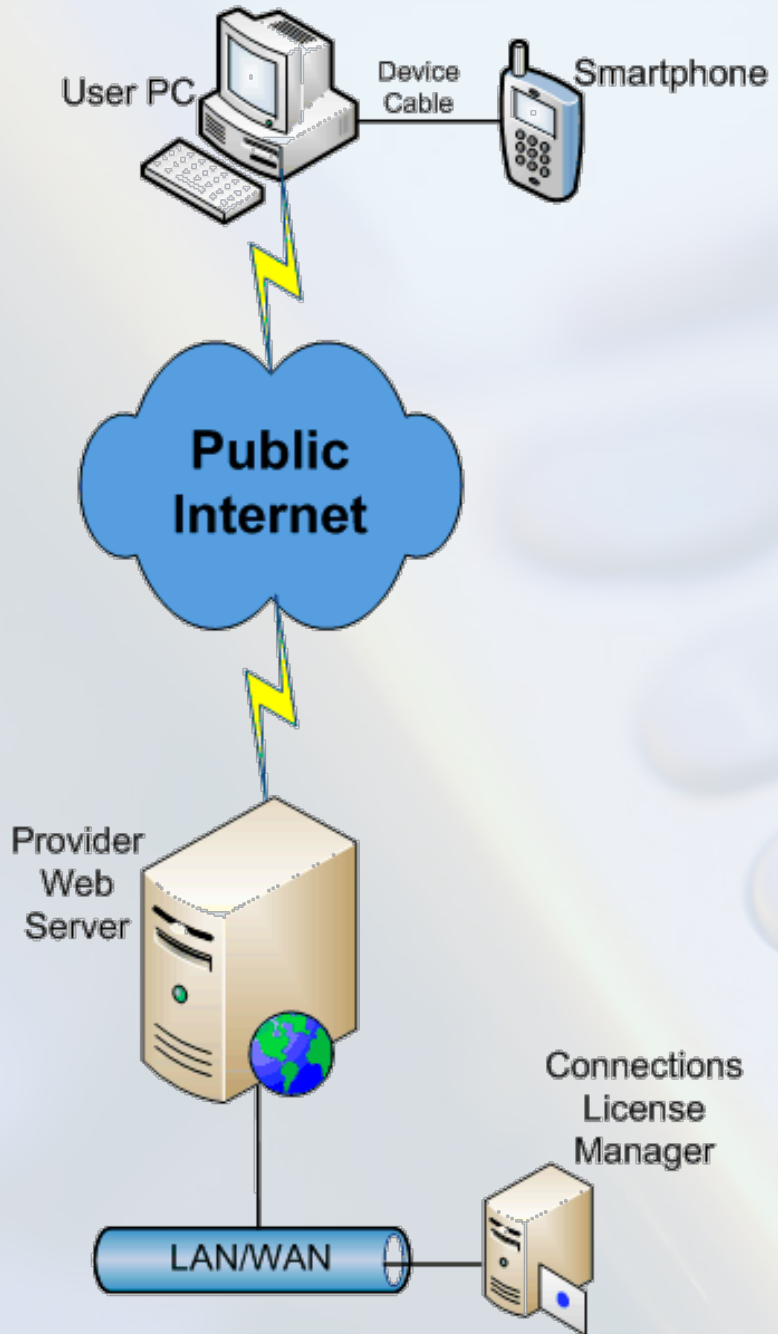

Hosted by the provider, this piece of software maintains records of the license bundles purchased, delivered, and remaining for the CSP.

Technical specifications

CONTEX Connections has been tested on all updated software versions for the smartphone device.

- Devices Supported: BlackBerry® models running device software 4.5, 4.6 or 4.7.
- Network: All controls are via DTMF and most networks are compatible.
