Get to Know Companion

Companion is the conferencing solution for users who want more control at their fingertips. This versatile application must be used in conjunction with an EVERGREEN system. (For a stand-alone option, please ask about Voyager). Companion seamlessly interfaces with the EVERGREEN MCU to allow users to connect to and manage conferences without the help of an operator. In an instant, you can initiate your conference and immediately participate in face-to-face collaboration.

Conference Features

Some of the many capabilities available to users include:

- **Flexible View Options:** Companion offers both a separate video view and a full screen view option.
- **Convenient Audio Controls:** Users are able to swiftly adjust volume and toggle their audio line (Mute/Unmute) right from the Companion interface.
- **Dynamic Self-View:** This option displays the user's own webcam video output.
- **Real-Time Statistics:** Users are able to instantly view call statistics within the Companion interface.
- **Individual Configuration:** Set connection parameters, including display name, hold image, connection rate, encoding, etc.
- **Image Viewer:** This feature enables a user to send a slideshow of captured images in lieu of live video feed.

Companion Main Window

With the optional Companion Plus feature set, you can expand control – enabling users to easily access the EVERGREEN active conference and contact lists.

Companion Core Features

- Direct connection to the conference room of choice
- Volume control
- Video and audio mute/unmute options
- Still picture and slideshow options
- Ability to view call statistics
- Ability to set basic call parameters
- Separate video window, self-view, and full-screen mode options
- Automatically populated to the contact directory when opened and removed when closed

Companion Plus Features

- Direct connection to the conference room of choice
- Ability to create conferences and view the EVERGREEN active conference list
- Ability to view the EVERGREEN contact list
- Volume control
- Video and audio mute/unmute options
- Still picture and slideshow options
- Ability to view call statistics
- Ability to set basic call parameters
- Separate video window, self-view, and full-screen mode options
- Automatically populated to the contact directory when opened and removed when closed

System Requirements

- Operating System: Windows XP or Windows 7 (32 and 64bit)
- Memory: 1 GB RAM
- 50 MB Free Hard Disk Space
- Java JRE 1.6 update 20 (or newer)
- Web Cam
- Minimum 150k symmetrical connection bandwidth
- Recommended 460k symmetrical connection bandwidth for an H.323 connection

Joining and Managing Conferences

With Companion, a caller enters their conferencing room number on the main screen, clicks Connect, and is then effortlessly linked into their video call. If the user has access to the Companion Plus feature set, they can also double-click any contacts in the contact directory or any conference listed in the conference directory to start a call.

Users can manage basic call parameters through the Settings option and adjust items such as the display name, hold image, connection rate, and audio and video encoding. In addition, Companion allows users to adjust audio volume levels and mute or unmute their audio line.

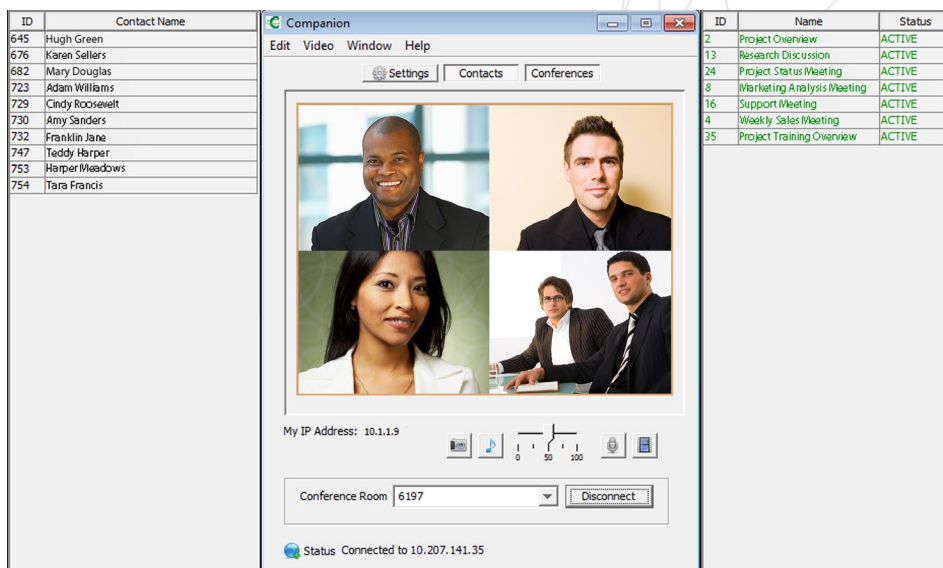

Additional Features

Screen Options

As additional parties join the call, the video splits into as many panels as there are participants. Users can view the video in a separate window or simply adjust the size of the video window to meet their needs.

Selecting the Separate Video Window option allows a user to view a resizable image of the conference video. Maximizing the window displays Full Screen mode.

The self-view option opens a new window that displays the video that the user is sending out to other participants.

Companion Plus Main Window

Companion Plus: Contacts and Conferences

The extended features available in this dynamic application help users create their own point to point and multipoint calls on the fly. Not only does the Companion contact list keep track of configured users, it also acts as a directory for quick dial-out. Additionally, the conferences list displays all conferences currently active on the system. Both lists are displayed on opposite sides of the main window (shown above) and are accessed at the click of a button.
