Wishing you a Happy Holiday season and a peaceful, prosperous New Year

As 2025 comes to a close, Compunetix sends you Season's Greetings for a wonderful holiday and a Happy New Year! We would also like to thank you for being part of our continued success.

As always, we look forward to growing with you in 2026 and beyond!

The Digital Front Door: Elevating Student Services with the Blueprint for a Connected Campus

Student satisfaction often hinges on the moments *between* classes—the administrative interactions regarding financial aid, advising, and admissions. Yet, for many institutions, these support channels remain fragmented and difficult to navigate. The friction caused by outdated support models doesn't just frustrate students; it creates administrative bottlenecks that directly impact retention.

At Compunetix, we believe that accessing campus services should be as seamless as the education itself. To help institutions eliminate these barriers, we are proud to announce the release of our comprehensive guide: [The Blueprint for a Connected Campus](#).

Reliability and Flexibility When It Counts Most: Emergency Conferencing for Energy & Utilities

The moment a crisis strikes—whether it's the sudden scream of a tornado siren, the unsettling silence after an earthquake, or a widespread power outage—everything changes. In that instant, our most primal need surfaces: to know what's happening and what to do next.

In today's energy and utilities sectors, **reliability and rapid communication** are essential. Power outages, infrastructure failures, natural disasters, even the evolving economy can demand immediate action. Customers expect fast restoration and clear communication, while organizations must minimize downtime and financial losses. To meet these challenges, Compunetix delivers purpose-built **emergency conferencing and mass notification solutions** designed to keep critical communication lines open when they matter most.

Command and Control at Your Fingertips: The Compunetix Touch Interface

Compunetix Touch Interface (TUI) — part of ConnectNow+ — delivers a real-time, touchscreen-based command-and-control dashboard built for mission-critical settings like defense, emergency response, and enterprise command centers.

It pulls data from sensors, cameras, databases and displays everything on “dynamic cards,” giving operators full situational awareness and configurable alerts. Users can customize layouts, dashboards,

and workflow controls to match their roles, and the interface works across tablets up to large-format control displays.

Security is integral: TUI supports role-based access, end-to-end encryption, and secure voice communications — all underpinned by documentation, training, and technical support from Compunetix.
