

Compunetix: A Leader in JITC Certified Communication

The Joint Interoperability Test Command (JITC) is the DoD's program tasked with ensuring that all IT products utilized by the warfighters work seamlessly together and support mission needs. Certification consists of a stringent set of IO and IA testing on all information technology systems hardware, software and components that wish to be connected to the DoD's networks. JITC services the Defense Information Systems Agency (DISA), combatant commands, the Department of Defense (DoD) and other federal agencies, allies, coalition partners and commercial vendors.

The JITC certified conferencing platforms that Compunetix engineers and manufactures offer secure communication solutions to some of the world's most demanding clients. Our customers provide mission-critical communications support to institutions across the U.S. Government including the White House, Joint Chiefs of Staff, Air Force One, Air Force Two, National Airborne Operations Center, U.S. Strategic Command (USSTRATCOM), Special Airlift Missions and more. The Impact of Virtual Doctor Visits and Telemedicine

One area of great impact for electronic collaboration is the market of eHealth, or telemedicine. As the digital revolution upends dozens of traditional business models and market segments, from publishing to transportation to banking, it now sets its sights on transforming the way we receive our health care.

It seems the whole industry is trying to figure out ways to reduce costs while simultaneously increasing the level of care. Electronic collaboration is a major component to most eHealth roll-outs, and may have the most immediate impact on both costs and patient well-being.

Compunetix video conferencing Sales Manager, Antonio Capodiecici and his telemedicine point-man, Account Manager, Alvaro Cruz, were recently quoted in a [TribLive article](#) on this very subject.

For more information on the numerous video conferencing solutions that Compunetix offers,
