

Compunetix Provider Transcription Portal™

KEY BENEFITS

- **Time Savings**
Eliminates the need to move files around in multiple locations, or insecurely, to an outside organization
- **Cost Efficient**
Rather than overpay for services that you aren't using, purchase hours of batch processing
- **Scalability**
Can support and deliver up to thousands of transcribed/translated files per hour
- **Accurate**
Stunningly accurate voice transcriptions along with voice identification and accent handling
- **Persistent**
Transcriptions can be saved and made searchable creating a directory of business knowledge

Timely, Accurate Transcriptions Efficiently Address this Meeting Challenge

The Compunetix Provider Transcription Portal (PTP) is a new batch processing application for collaboration service providers and CONTEX Summit Olympus and Conference Manager customers.

The Provider Transcription Portal is a utility and operations extension to the CONTEX Recording Manager workflow. PTP enables and empowers providers to quickly schedule and batch process audio files for transcription and translation, in a fast, smooth and efficient manner, from within the recording manager application.

The PTP is a Compunetix designed engine for connecting to a directory of previously recorded audio files, affixing the proper options for each, and sending/receiving those files from our cloud processing platform. This purpose built application was designed with providers in mind, allowing for scheduled and managed processing of files. An added benefit is an easy and intuitive interface for selecting, uploading/downloading and reviewing the received transcription/translations for delivery to the end customer.

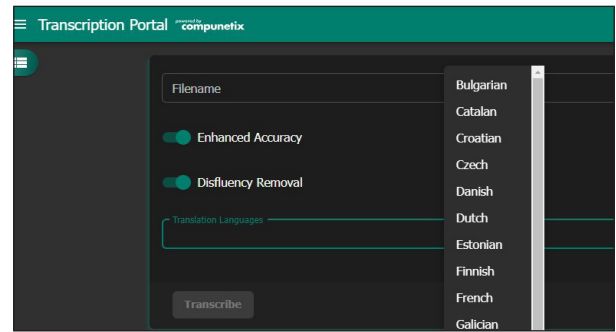

Empower Your Meetings for Transcription

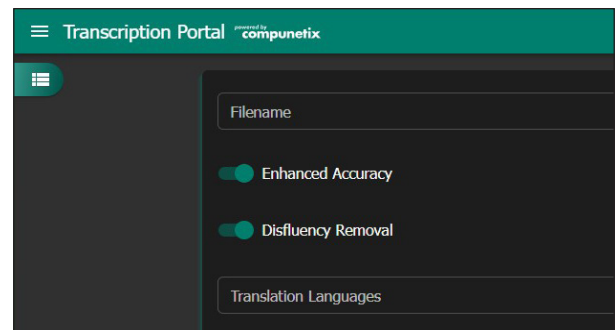

Key Features:

- **Timeliness:** Bridge the gap for providers who want more control over the timing and return of transcriptions
- **Same Engine:** Leverage the same voice-to-text transcription that powers our in-meeting transcription/captioning
- **Variety of Languages:** Initial options can include simple English transcription or up to 5 additional translations
- **Local Install:** Vetted and tested application installed locally, but with cloud back-end
- **Recording Manager:** Requires the Compunetix Recording Manager which can be used with, and pointed at, any directory of recordings.
- **Fully On-premise Option:** Compunetix offers a fully on-premise, server-based solution that forgoes the cloud processing in favor of local computation
- **Support:** Fully supported under the same Post Warranty Maintenance agreement as our other award winning products and solutions
